

Document your construction site progress autonomously with Karelics!
 Stay ahead of the competition - Run and conduct inspection
 using AI and intelligent construction robots.

Autonomous construction site Photo documentation

Unlimited projects,
 users and maps

High-resolution
 360-photos

View all photos
 on the map

Timemachine

► Usage scenarios

Progress monitoring
 regular daily construction
 site inspection

**Subcontractor
 Coordination**
 send robot to any place to
 get photo confirmation of
 subcontractors work
 done

Safety inspection
 leaks detection, blocked
 emergency exits
 inspection

**Equipment Maintenance
 and Inspections**

**Material Tracking
 and Inventory**

**Management
 Conflict Resolution**
 resolve disagreements
 related to workmanship,
 site conditions, or
 contractual obligations

► Easy to set up and use

Photo documentation main features

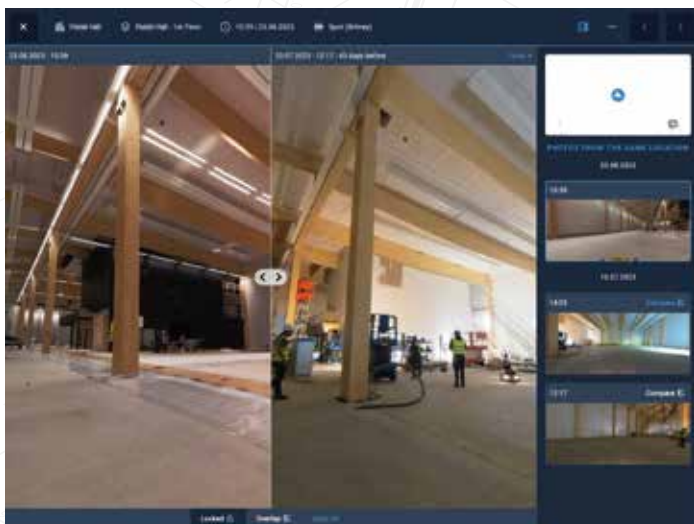

Autonomous 360-photo documentation

Automated Approach: Faster and simpler automated 360° photo documentation for construction projects, replacing manual methods.

Deeper Insight: Gain a comprehensive record of the construction site using robotic technology, similar to Google Street View. Understand project progress and set goals remotely.

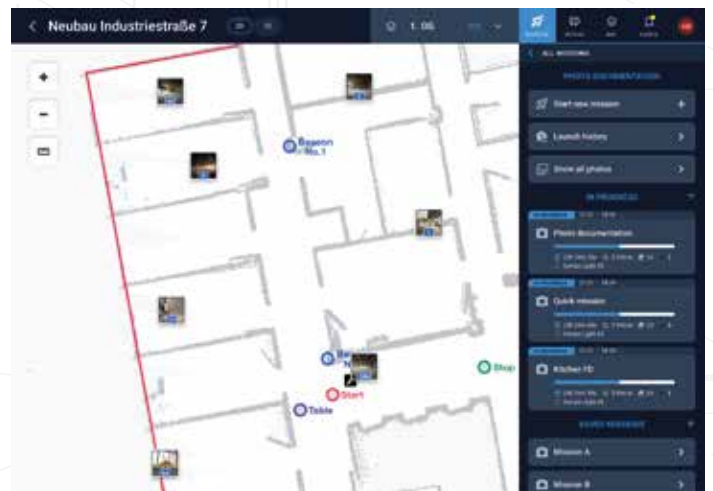

Time Machine

Progress Monitoring: Our cutting-edge Time Machine tool monitors project progress over time, capturing visual records to identify and address potential issues or delays.

Accurate Documentation: The Time Machine feature ensures reliable documentation of the entire construction process, capturing the project's evolution and milestones.

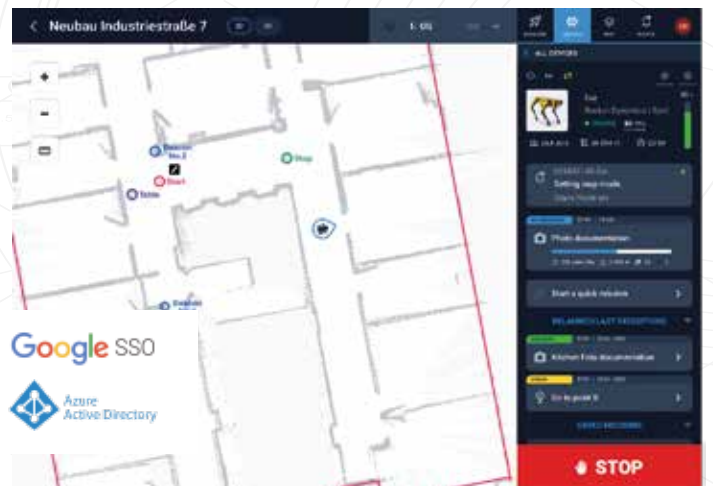

High-Resolution 360-Photos linked to Points on Map

Detailed Documentation: Create detailed and immersive documentation of the construction site using high-resolution 360-photos and videos, capturing the site's essence.

Easy Site Progress Tracking: Explore and analyse the progress of your construction site by linking photos and videos to specific locations. Enhance accessibility, simplify the evaluation of work done and identify early on if something is not going according to plan!

Enhanced Security and Safety

Streamline Integration: Integrated SSO from Azure AD and Google for working within corporate IT environment.

Effortless Remote Robot Missions: Trigger and Modify Missions with Ease.

Exploring the Benefits: A Comparison with BIM (Coming Soon!).
